

Cartea ***Psihopedagogia persoanelor cu dizabilitate neuromotorie*** este un suport de curs adresat studenților din anul doi de la specializarea Psihopedagogie specială, care au în programa școlară un curs cu această tematică. Titlul lucrării este sugestiv, face referire la toate persoanele cu această dizabilitate, indiferent de gradul de afectare. Fiind ușor de parcurs, este o lectură accesibilă care ajută studenții să înțeleagă situația indivizilor care au dizabilitate și să își fixeze mai bine cunoștințele acumulate de-a lungul unui semestru.

The book ***Psychopedagogy for neuromotor disability*** is a course support addressed to second-year students of the Special Psychopedagogy specialization, who have a course on this topic in the school curriculum. The title of the paper is suggestive, it

refers to all people with this disability, regardless of the degree of impairment. Easy to read, it is an accessible book that helps students understand the plight of individuals with neuromotor disability and better consolidate the knowledge they have accumulated over the course of a semester. The work includes clearly delimited chapters, structured in such a way as to facilitate the separation of essential notions, highlighting them through differences of color and characters. At the beginning of each chapter, its objectives are presented, and at the end there are some tasks to help fix the notions. Being a course support, it is a scientific work, intended for future psychopedagogical teachers. The merit of this work is that, in the current context in which we find specialized works less and less, it is harder and harder to find a new work, updated to today's educational requirements, students will have the opportunity to have in their personal library a useful course support and bibliographic material brought up to date.
